

# Test Summary - Issue #163

## Character identity, hair color, and initial theme defaults

- Scope: Yumi deep blue hair; stable character id sol displays/defaults as Mary with deep green hair.
- New accounts and legacy saves missing profileColor/backgroundPattern receive one legal random initial theme , then persist.
- Asset rule honored: GPT/imagegen raster editing was used as the art source; runtime assets are WebP bitmaps. No SVG, CSS filter, or runtime art special-case was introduced.
- Primary device validated in Codex in-app Browser at 390 x 740 mobile viewport on <http://127.0.0.1:4184/>.

### Automated Checks

|      |                                                                          |
|------|--------------------------------------------------------------------------|
| PASS | npx -p typescript tsc --noEmit --project jsconfig.json                   |
| PASS | pwsh scripts/docLint.ps1 -Path docs/design.md                            |
| PASS | pwsh scripts/repoLint.ps1 -Path .                                        |
| PASS | git diff --check (CRLF normalization warnings only)                      |
| N/A  | npm audit --audit-level=moderate: no package-lock.json in repo (ENOLOCK) |

# Browser Verification

- profile-color selftest: PASS, random legal theme and persistence verified.
- data-audit selftest: PASS, sol label is Princess Mary and base assets use ?v=20260619-issue163-character-theme-r1.
- accounts selftest: PASS.
- save-load selftest: PASS.
- Mobile visual QA: PASS; DOM reported no horizontal overflow and visible cards for Lumi, Yumi, Mary, Rosa.

## Mobile Screenshot

- Mary card appears in the selection grid with green hair.
- Yumi card appears with deep blue hair.
- Names and controls fit within card/panel bounds.
- Lower theme controls are reachable by scrolling.

# Raster Asset Evidence

The final runtime character bases preserve the original 512 x 768 rig canvas and transparent alpha, while hair color was derived from GPT/imagegen edited raster references. The generated source material was not committed as runtime art; only final WebP assets are used by the game.

## Gate Coverage

- Design/README contract present and issue scope implemented.
- No SVG/vector replacement or runtime hair-color filter added.
- State migration covers old saves without discarding custom saved colors.
- A5 test-summary.pdf regenerated for this code stage.
- PR remains linked to Issue #163 without closing keyword.

# Expert Review Findings

## A/B: implementation and asset quality review - 10 checks

- Mary naming is visible while stable id sol remains internal: acceptable.
- Yumi deep blue hair is distinguishable from skin/clothing and original silhouette: acceptable.
- Mary deep green hair reads clearly at mobile card scale: acceptable.
- 512 x 768 transparent raster contract preserved for both changed bases: acceptable.
- Cache-busted character asset version prevents stale browser assets: acceptable.
- Fresh account theme randomness uses legal registry values: acceptable.
- Legacy missing theme migration does not overwrite existing custom theme values: acceptable.
- Starter wardrobe text no longer exposes the old Sol name: acceptable.
- No unrelated character costume, pose, or UI flow change detected: acceptable.
- Selftests cover registry, state, accounts, and save/load surfaces: acceptable.

## C: mobile character-select visual review - 10 checks

- Title and helper copy fit without overlap.
- Two-column character grid fits 390 px viewport without horizontal overflow.
- Selected-card focus ring remains visible and does not cover labels.
- Character labels fit within cards, including Princess Mary.
- Portrait scale remains consistent across all four characters.
- Hair hues remain readable inside pastel portrait panels.
- Name input and color swatches align cleanly below the grid.
- Background pattern controls are reachable by normal vertical scroll.
- No broken image icon or blank portrait detected in the rendered page.
- No must-fix visual defects for this issue scope.
