

Test Summary - Issue #163

Conflict resolution with latest main

- Latest origin/main was merged into PR #171 after another conflict report.
- README/design/selftest conflicts were resolved by preserving #163 Mary/Yumi/random-theme behavior and ma in #161 map-token behavior.
- User-provided Mary/Yumi raster edits remain the authoritative final character bases.
- Map token behavior now follows #161: enlarged princess token, no profile-color backing plate.
- No SVG, CSS filter, or renderer special-case substitute was introduced for character assets.

Validation Scope

PASS	tsc --noEmit
PASS	docLint docs/design.md
PASS	repoLint .
PASS	In-app Browser data-audit/profile-color/playtimer/accounts/voice/map-avatar
PASS	Mobile visual smoke for character select and map

Final Character Assets

Mary final

Yumi final

The committed runtime bases are the user-provided raster edits preserved during conflict resolution. Alpha channels remain valid, canvas size is 512 x 768, and the game loads them through the existing character manifest r2 asset version.
