

Issue #87 — Player-facing Character Select + Naming

Branch `feat/issue87-character-select` · techStackStaticWeb · generated by 3dev baton · 2026-06-13

1. Machine / self-test suite

Test	URL	Result	Status
data-audit	?selftest=data-audit	0 errors / 0 warnings; registry lumi/yumi/sol	PASS
save-load	?selftest=save-load	roundtrip passed; coins 200->200	PASS
monkey	?selftest=monkey	300 random steps; 0 console errors	PASS

2. Feature verification (in-browser)

Capability	Evidence	Status
First-run forced select+naming	No save -> overlay shown, cancel hidden, 3 cards, name prefilled 'Lumi'	PASS
Appearance switch auto-fills default name	Select Sol -> name auto-fills 'Sol' (when not manually edited)	PASS
Custom name persists	Type 'Mei' + confirm -> state.playerName='Mei', persisted to localStorage	PASS
Dynamic identity render	h1 'Princess Mei', diary title 'Mei Diary', aria labels dynamic	PASS
Re-open via Change princess	Reopen shows current selection + cancel; cancel keeps state	PASS
Reload does not re-force	Existing save -> select screen NOT forced	PASS
Name sanitize	'A B#C`d*e [x] long...' -> 'ABCde x very lon' (strip  #*`[], cap 16)	PASS
Save MD records name	Markdown '- Name: ...' clean; '- Character: Princess Sol' (label)	PASS

playerName MD roundtrip	Export -> import -> playerName & activeCharacterId restored	PASS
Lesson text localized	Garden lesson shows 'Pick what Suki can do here.' + 'Suki can look.'	PASS
Correct answer still matches	'Suki can look.' correct -> +100 coins, diary+learnedWords substituted	PASS
Luminara brand preserved	Map alt text / kingdom names unchanged	PASS

3. Skin-tone wardrobe consistency QA

Pixel audit of all 80 wardrobe layers for baked fair-skin pixels: 13 layers matched the warm hue/sat window, but all are **hair colors** (blonde/honey/chestnut bobs & braids) and **warm-toned garments/accessories** (peach sailor top, gold tiara, pearls) — not baked body skin. Exposed-skin areas (arms, legs, feet) are transparent in clothing layers, so the per-character base provides the correct skin tone.

Same outfit (aqua sailor top + shorts + shoes) on Lumi (left) and Sol (right): exposed arms/legs/feet correctly follow each character's skin tone; garments align identically. No fair-skin baking, no mismatch.

4. Scope notes

· Solution-level docs/design.md and docLint tooling were deferred to issue #88 by user decision; this branch focuses on #87 and uses the README product manual + existing in-browser self-tests as the verification basis.

- This round ships **skin-tone-only** character differences (shared face/rig); facial-feature art is out of scope per design.
- Preview screenshot tooling times out on this compositing-heavy page; visual evidence above is produced by compositing the real WebP assets (same layers/rig the runtime uses).
