

solKidGalGame Test Summary - Issue #168

Wardrobe alignment and bitmap asset QA

- Implemented wardrobeLayerBoundsByType class-level render bounds and safeBox metadata.
- data-audit validates item type, inherited bounds, alpha safeBox, PNG/WebP bitmap assets, and rejects SVG wardrobe layer/thumb assets.
- Rendered QA was performed in the in-app Browser on the real localhost app.
- This PDF includes the actual wear-on screenshots used for review: desktop initial outfit, desktop interaction after equipping another dress, and mobile portrait view.

Verification commands / results

- pwsh scripts/docLint.ps1 -Path docs/design.md: PASS
- npx --yes -p typescript tsc --noEmit --project tsconfig.json: PASS
- Wardrobe layer/thumb SVG scan: PASS
- In-app Browser data-audit: PASS, 80 wardrobe layers checked, no errors/warnings
- Wardrobe-detail desktop and 390x844 mobile visual QA: PASS, no console errors/warnings

Desktop wardrobe-detail: Rose festival dress equipped

Desktop interaction: Equip Blue harbor dress -> blueDress

Mobile portrait 390x844: Rose festival dress equipped
